

Active Voice Solutions

Active Voice is a global leader in unified messaging, computer telephony and voice applications. Our business solutions empower people to communicate and manage their information conveniently and efficiently using virtually any communication device to access and control their messages, data and real-time communications.

Versatility. Continuity. Innovation.

Active Voice realizes that not every organization is ready to make the full transition from Voice Mail (VM) to Unified Communication (UC) in one single step.

Our products, solutions and licensing models enable organizations to advance their communications solutions with the least amount of business disruption.

Active Voice offers organizations a platform to help transition from VM to UC at their own pace, while building the technology and business practice to support it.

Active Voice continues to develop innovative communication products, features and solutions for organizations heading toward full Unified Communications.

Through our next generation Unified Messaging System (Kinesis®), our small and mid-size business messaging solution (Repartee®) and applications such as VideoMail and Active Voice SPEAK, we are building the most innovative, scalable and affordable portfolio of communications solutions — unifying video, voice and data technologies.

Kinesis is built for enterprise organizations looking for a scalable and versatile unified messaging solution. Capabilities such as failover, redundancy and geographically dispersed clustering ensure business continuity. Kinesis minimizes the impact on training, operations and budgets with Octel and Centigram emulations and OctelNet integration capabilities.

Repartee is a powerful yet affordable messaging system that helps small and mid-size businesses deliver better customer service and improved communications. Whether adding employees or enhancing with UC applications, Repartee easily expands for your growing communication needs.

VideoMail allows you to send personalized video messages and recorded screen captures through your email. There are numerous applications for VideoMail technology, including IT troubleshooting, design reviews, sales and marketing.

SPEAK uses the latest innovations in speech technology. It provides personalized front-end speech-based reception to greet and route callers, as well as manage internal calls to employees and departments.

Active Voice Solutions

With over 200,000 systems sold in more than 60 countries, Active Voice products fit into a wide variety of business environments — from small companies with as few as 10 people, to large enterprises with thousands of employees.

Active Voice provides solutions for a broad range of industries			
Professional Services Hospitality and Lodging	Government Education	Health Care Financial Services	
Messaging Solutions	Small Business	Mid-Sized Business	Large Enterprise
